In volume one (1) the author shows the beginner how to make a sand mold and then how to hone your skills to produce high quality castings. Written in non-technical terms, the sand casting manuals begin by melting aluminium cans over a charcoal fire and end by casting a cylinder head. Volume two (2) coniinues tje sand casting manual by describing more advanced techinques.

"Learn the art of box making from one of the foremost experts of the craft. Through Doug Stowe's decades of experience, you'll learn the basic techniques to get started, as well as more advanced ways to approach finely crafted boxes"--Publisher website (publisher website (December 2007).

"How much do you need to know about electronics to create something interesting, or creatively modify something that already exists? If you're in a technical field such as software development, and don't have much experience with electronics components, this hands-on reference helps you find answers to technical questions quickly. Filling the gap between a beginner's primer and a formal textbook, Practical Electronics: Components and Techniques explores aspects of electronic components and techniques that you would typically learn on the job and from years of experience. Even if you've worked with electronics, or have a background in electronics theory, you're bound to find important information that you may not have encountered before. Among the book's many topics, you'll discover how to: Read the data sheet for an electronic component ; Use a variety of tools involved with electronics work ; Assemble various types of connectors ; Minimize noise and interference on a signal interface circuit. Explore topics not usually covered in theoretical books, and go deeper into practical aspects than a step-by-step, project-oriented approach, with Practical Electronics: Components and Techniques." --
