This laboratory manual is intended for a two-semester general chemistry course. The procedures are written with the goal of simplifying a complicated and often challenging subject for students by applying concepts to everyday life. This lab manual covers topics such as composition of compounds, reactivity, stoichiometry, limiting reactants, gas laws, calorimetry, periodic trends, molecular structure, spectroscopy, kinetics, equilibria, thermodynamics, electrochemistry, intermolecular forces, solutions, and coordination complexes. By the end of this course, you should have a solid understanding of the basic concepts of chemistry, which will give you confidence as you embark on your career in science.

Written for the psychologist, philosopher, and layperson interested in consciousness, *Exploring Inner Experience* provides a comprehensive introduction to the Descriptive Experience Sampling (DES) method for obtaining accurate reports of inner experience. DES uses a beeper to cue participants to pay attention to their experience at precisely defined moments; participants are then interviewed to obtain high-fidelity accounts of their experience at those moments. *Exploring Inner Experience* shows (a) how DES uncovers previously unknown details of inner experience; (b) how the implications of this method affect our understanding of inner experience and the human condition more generally; (c) how DES avoids the traps that destroyed the introspections of the previous century; (d) why DES reports of inner experience should be considered reliable and valid; and (e) how to use the DES method. This book will be basic reading for all psychologists, philosophers, and students interested in consciousness, as well as anyone who is seriously concerned with understanding the human condition. (Series B)

Chemistry in the Community (ChemCom) is a year-long high school chemistry course for college-bound students, structured around community issues related to chemistry. The course is about 50% laboratory-based, and features decision-making activities which give students practice in applying their chemistry knowledge in realistic decision-making situations. Concepts are presented on a "need-to-know" basis, allowing students to experience the use and application of their chemistry learning, leading to a greater sense of motivation and a feeling of ownership of their new knowledge. Because of the nature of the issues covered in the specific units, students learn more organic and biochemistry than in traditional courses, as well as some environmental and industrial chemistry.

Over two previous editions, *Exploring Anatomy & Physiology in the Laboratory* (EAPL) has become one of the best-selling A&P lab manuals on the market. Its unique, straightforward, practical, activity-based approach to the study of anatomy and physiology in the laboratory has proven to be an effective approach for students nationwide. This comprehensive, beautifully illustrated, and affordably priced manual is appropriate for a two-semester anatomy and physiology laboratory course. Through focused activities and by eliminating redundant exposition and artwork found in most primary textbooks, this manual complements the lecture material and serves as an efficient and effective tool for learning in the lab.
