In the last decade, significant changes have occurred in the field of vehicle motion planning, and for UAVs in particular. UAV motion planning is especially difficult due to several complexities not considered by earlier planning strategies: the increased importance of differential constraints, atmospheric turbulence which makes it impossible to follow a pre-computed plan precisely, uncertainty in the vehicle state, and limited knowledge about the environment due to limited sensor capabilities. These differences have motivated the increased use of feedback and other control engineering techniques for motion planning. The lack of exact algorithms for these problems and difficulty inherent in characterizing approximation algorithms makes it impractical to determine algorithm time complexity, completeness, and even soundness. This gap has not yet been addressed by statistical

Read PDF Selected Papers From The 2nd International Symposium On Uavs Reno

characterization of experimental performance of algorithms and benchmarking. Because of this overall lack of knowledge, it is difficult to design a guidance system, let alone choose the algorithm.

Throughout this paper we keep in mind some of the general characteristics and requirements pertaining to UAVs. A UAV is typically modeled as having velocity and acceleration constraints (and potentially the higher-order differential constraints associated with the equations of motion), and the objective is to guide the vehicle towards a goal through an obstacle field. A UAV guidance problem is typically characterized by a three-dimensional problem space, limited information about the environment, on-board sensors with limited range, speed and acceleration constraints, and uncertainty in vehicle state and sensor data.

This book looks at codification from a broad, international perspective, discussing general themes as well as various legal fields. Since codification is a subject of intense current interest in East Asia, this second volume on codification is dedicated to the sub-theme of codification and legal transplant in this area, focusing on China, Japan, Korea and Taiwan. It includes two papers that discuss development of codification in East Asia and Korea in particular. It is also comprised of two reports that draw comparative lessons from Japan, India and Indonesia. In addition, this volume consists of four general reports and 19 national reports that guide readers through the knowledge of codification of commercial law, administrative law, civil law and private international law in East Asia. This book is developed from
