Urban and Regional Development The design and growth of cities has and enduring impact on society, culture and the environment. Existing practices for urban and regional development must balance between environmentally sustainable solutions, effective approaches in the short-term and a wider perspective on future generations.

Urban and Regional Development - LSE Home

development trajectory of a city, a key factor to be explored is its structural evolution, which has to be traced back to the operation of a number of mechanisms. When highlighting cities' structural evolution as a key factor in interpreting cities' development trajectories, two aspects should be borne in mind. Firstly, cities are 'open

- the trajectories taken by cycles of contention around urban developments in terms of their co-evolutive patterns in relationships to responses from the policy environment; - the dynamics, mechanisms and conditions by which modes of contestation and conflict may develop from forms of antagonistic polarization into forms of local policy transformation and innovation.

Urban and Regional Development Trajectories in Contemporary Capitalism Routledge Frontiers Of Political Economy

This book re-evaluates a rich scientific heritage of space- and history-sensitive development theories and produces an integrated methodology for the comparative analysis of urban and regional trajectories within a globalized world. The main argument put forward is that current mainstream analyses of urban and regional development have forgotten this rich heritage and fail to address the connections between different dimensions of development, the role of history and the importance of place and scale relations. The proposed methodology integrates elements from different theories – radical economic geography, regulation approach, cultural political economy, old and new institutionalism – that all share a strong concern with time and space dynamics. They are recombined into an interdisciplinary (meta)theoretical framework, capable of articulating the overall problem of socio-economic development and providing methodological anchors for comparative case-study analysis, while recognizing context specificities. The analytical methodology focuses on key dynamics and relations, such as strategic agency and collective action, institutions and structures, culture and discourse, as well as the tension between path-dependency and path-shaping. The methodology is then applied to eight urban and regional cases, mostly from Western Europe, but also from the United States and China. The case studies confirm the relevance of time- and space-sensitive analysis, not only for understanding development trajectories, but also for policy making. They ultimately highlight that, while post-war institutions were able to address systemic contradictions and foster a relatively inclusive development model, the neoliberal turn has led to reductionist policies that not only have resulted in an increase in social and spatial inequalities, but have also undermined growth and democracy.

Urban and Regional Development Trajectories in Contemporary Capitalism Routledge Frontiers Of Political Economy

This book explores the innovative workplaces, namely coworking spaces and makerspaces, that are emerging as a consequence of digital innovations and the related development of the knowledge economy and society in the wake of deindustrialization. Drawing on international and multidisciplinary research projects, fresh insights are provided into current trends, research methodologies, actors, location patterns and effects, and urban and regional policies and planning. The aim is to cast light on all aspects of these new working and making spaces, highlighting their innovative geographies and the complexities of their nexus with urban and regional change processes from both the theoretical and the empirical point of view. The book includes multiple illuminating case studies from the advanced economies of North America and Europe, carefully selected for their relevance to the topic under analysis. This book is designed for an international audience comprising not only academicians but also policymakers, representatives of civil and entrepreneurial associations, and business operators.

This book analyses and compares the development paths of five major cities in East and Southeast Asia since the early 1960s, including Ho Chi Minh City, Jakarta, Manila, Seoul, and Shanghai. In examining these five cases through a carefully crafted conceptual framework, the author excavates an understanding of the dynamics that have enabled Seoul and Shanghai to become highly competitive as major engines of economic growth, while simultaneously accounting for why the other three cities have faced numerous problems in terms of meeting their development goals. Presenting both quantitative and qualitative data to trace the course of changes between 1960 and 2015, the case studies curate six possible explanations for the different cities' developmental trajectories. The book considers the national development strategy matters to the development of cities and positions the share of budget revenue retained for cities' expenditure as critical. The author demonstrates that consistently pursuing long-term strategies is important, and that public entrepreneurship with powerful supporting coalitions is vital. The book illustrates how master plans have played limited roles in the building of cities, and that fragmented governments are often at the root of the problems facing a city's development. This book will be highly relevant to researchers in international and Asian urban development.

This book addresses the influences of planning cultures and histories on the temporal evolution of planning systems and spatial development. As well as providing an international comparative perspective on these issues, the contributions to the book also engage in a search for new conceptual frameworks and alternative points of view to better understand and explain these differences. The book makes three main academic contributions. First, it catalogues some of the key changes in planning systems and the impact on spatial development patterns. Second, it examines the interrelationship between planning cultures and histories from a path-dependency perspective. Third, it discusses the variations in physical development patterns resulting from different planning cultures and histories. Chapters from different parts of the European continent present evidence at different scales to illustrate these aspects. In all cases, the specific combinations of political, ideological, social, economic and technological factors are important determinants of urban and regional planning trajectories as well as spatial development patterns. This book was previously published as a special issue of European Planning Studies.

Significant historical and geographical differences account for the many processes and trajectories of regional development in East Asia. These historical and geographical specificities in East Asia have prompted serious re-examination of existing theories in regional development, and in particular the "new regionalism" approach associated with such ideas as the learning region, institutional thickness, relational assets, and regional innovation system. This book brings together a group of leading researchers specializing in local and regional development in East Asian economies. Through in-depth empirical studies of specific regions and localities, these authors offer fresh and innovative perspectives on how regions evolve and develop over time in the world's most dynamic macro-regional economy. In particular, their work points to the critical importance of local and trans-local processes in shaping regional development trajectories. The book is timely given that the debate on the nature and dynamics of regional development in both academic and policy circles has now moved on. From the earlier focus on endogenous regional assets (such as localized networks of association and trust), scholars and policymakers are now analyzing the complex relationship between economic globalization and regional change. This high calibre collection makes a significant contribution to the literature on local and regional development in Asia and provides an important resource for researchers, students, and policy makers interested in East Asia. This book was published as a special issue of Regional Studies.

This book is an account of how the Milan Provincial Administration and a team of researchers from Milan Polytechnic worked together to develop a new 'Strategic Plan' for Milan's urban region. Informed by innovative conceptions of both how to understand cities in the contemporary world, and engage in strategic planning work, this experience has already attracted considerable international attention. The authors now consolidate their contribution into a comprehensive account which continually relates theory and practice Examining the Milan Plan in detail, the book explains the profound transformations which put great pressure on the traditional descriptive tools so planners must engage in the production of new ones. It also proposes that these transformations affect the way in which urban policies and planning processes are designed. The project offers insights into - and new directions for - planning theory more generally, while at the same time testing this powerful and innovative research hypothesis in an important European city empirical study. In detailing the results of this project, this book proposes useful ground-breaking approaches to planning for similar urban regions.

ÓThe challenges of poverty and social exclusion cannot be fully resolved through conventional public sector policies and market-led innovation. The case studies in this Handbook capture some of the key success factors of socially innovative action in different socio-economic contexts. This Handbook will inspire readers as it highlights the creativity and commitment of diverse enterprises and movements working for social innovation.Ó Ð Anna Kajumulo Tibajuka, Minister for Lands, Housing and Human Settlements, United Republic of Tanzania, and retired UN Under Secretary General, immediate former Executive Director of UN-HABITAT ÓSocial innovation may not be a new idea but it is clearly an idea whose time has come, not least because the traditional models of innovation Ð narrowly framed technical models Ð have run their course and no longer resonate in a world of societal challenges. This Handbook has two great merits Ð it brings conceptual rigour to the debate and it provides compelling narratives of social innovation in practice.Ó Ð Kevin Morgan, Cardiff University, UK ÓIn an era where social innovation is re-emerging as an important policy framework for bringing social transformation, this volume is a significant contribution to the theory and practice of social innovation. The incremental discussion from concepts to theory to practice and then to social innovation research is supported by cases literally from all over the globe. It moves the discourse from isolated models of neighbourhood engagements and social enterprises, to a comprehensive, multidimensional approach combining needs, social relations and empowerment. A must read for academicians, learners, practitioners and policy makers alike.Ó Ð S. Parasuraman, Tata Institute of Social Sciences, Mumbai, India ÓSocial innovation is an important instrument for understanding how contemporary societies deal with social change and how social practices and policies intended to combat poverty and social exclusion are developed and implemented effectively. The Handbook offers a valuable contribution to the development of a clear, transdisciplinary and critical understanding of social innovation practices. The reader will find an in-depth discussion of the most important theoretical approaches to the concept and a thorough exposition of the epistemological and methodological framework for research in social innovation. The volume includes a number of interesting case studies in different areas of social change and issues of policy and governance.Ó Ð Enzo Mingione, University of Milano-Bicocca, Italy This enriching Handbook covers many aspects of the scientific and socio-political debates on social innovation today. The contributors provide an overview of theoretical perspectives, methodologies and instructive experiences from all continents, as well as implications for collective action and policy. They argue strongly for social innovation as a key to human development. The Handbook defines social innovation as innovation in social relations within both micro and macro spheres, with the purpose of satisfying unmet or new human needs across different layers of society. It connects social innovation to empowerment dynamics, thus giving a political character to social movements and bottom-up governance initiatives. Together these should lay the foundations for a fairer, more democratic society for all. This interdisciplinary work, written by scholars collaborating to develop a joint methodological perspective toward social innovation agency and processes, will be invaluable for students and researchers in social science and humanities. It will also appeal to policy makers, policy analysts, lobbyists and activists seeking to give inspiration and leadership from a social innovation perspective.

A core text for upper-level courses in urban geography; urban planning; and urban studies at the university level.

The notion of proximity is increasing in popularity in economic and geographic literature, and is now commonly used by scholars in regional science and spatial economics.
